

Dental practice checklist for handling waste to **ISO14001** standards

Achieving and maintaining ISO14001 certification isn't easy - but it is important.

This checklist will help you to get the right processes in place and make sure everyone knows how to play their part.

To meet ISO14001 standards for waste management, dental practices need the following:

- An initial waste audit
- A project plan
- A documented waste management policy
- Robust waste segregation processes
- Safe waste storage
- Waste records
- Emergency procedures
- Ongoing staff training & PPE
- Licensed specialist waste disposal services

Stericycle supports its customers with straightforward advice, support to implement best-practice waste management policies and practical end-to-end solutions.
