

BioTrack Label Information

BioTrack is Stericycle's bespoke information system which automates the production of hazardous waste consignment notes and tracks each individual consignment of waste.

The information is contained on a unique colour-coded luggage-label style tag that must be applied to every container to be collected. The barcode on each label holds data regarding producer information, type of waste, treatment requirements, ADR carriage requirements, and relevant UN number to ensure correct treatment and disposal of your healthcare waste.

VA - Infectious animal waste for incineration

VI - Infectious veterinary waste for incineration

VL - Non-haz veterinary waste

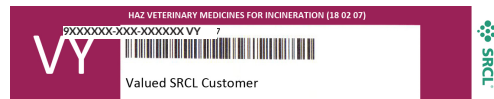

VP - Non-haz veterinary medicines for incineration

VT - Infectious veterinary waste for treatment

VY - Haz veterinary waste for incineration

Bins without tags will **NOT** be collected

A tag **MUST** be attached to every wheeled bin. It is recommended that this be done at the point of waste generation/collection by porter staff.

We protect what matters.
