

Bio Systems

SUSTAINABLE

Up to 600 uses. Equivalent to running two small cars for a year (for a typical 1200 bed NHS Trust).

SAFE

Typical reduction of 77% of needle stick injuries. Puncture resistant, eliminates over filling by proactively managing replacement of containers.

CHOICE

Three different container sizes - 7.5 litres, 15 litres and 30.2 litres with corresponding wall brackets, lid types and trolleys to maximise use of space.

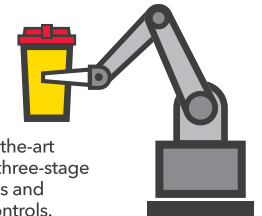

ECONOMICAL

Average cost saving of 10% - 20% over the total costs involved against operating a single-use sharps container.

CLEAN

Unrivalled state-of-the-art technology with a three-stage disinfection process and stringent quality controls.

The choice for clinical and non clinical staff

"For us, the Bio Systems containers with horizontal lids are very suitable as we are not allowed to and don't dismantle syringes."

Senior Staff Nurse (ITU), East Sussex Hospitals NHS Trust

"The carbon reductions presented by adopting Bio Systems has been very attractive to us. Also, we are now not just purchasing disposable containers to just burn them once they are full!"

Cancer Research UK, Cambridge Institute

"One of the main things for me is that there is no need to fill in the labels on the containers as we used to have to do. I've been a nurse for 14 years and it's a pain having to remind staff to fill in the labels."

Senior Sister, Quality & Practice Development, A & E, East Sussex Hospitals NHS Trust
