

BioTrack Guide

BioTrack is Stericycle's bespoke information system which automates the production of hazardous waste consignment notes and tracks each individual consignment of waste.

The information is contained on a unique colour-coded luggage-label style tag that must be applied to every container to be collected. The barcode on each label holds data regarding producer information, type of waste, treatment requirements, ADR carriage requirements, and relevant UN number to ensure correct treatment and disposal of your healthcare waste.

HI - Infectious waste for incineration

HS - Infectious sharps

HT - Infectious waste for treatment

HL - Non-hazardous waste

HA - Infectious anatomical waste

HY - Cytotoxic / cytostatic waste

HP - Non-hazardous medicines

A tag **MUST** be attached to every wheeled bin. It is recommended that this be done at the point of waste generation / collection by portering staff.

Bins without tags **WILL NOT** be collected.
